PROFESSIONAL SUMMARY

Full Stack Engineer with 3 years delivering secure applications across microservices and distributed systems, from design to production support. Proven record of enforcing coding standards and enterprise-scale deliveries. Adept at modernizing legacy applications and undertaking migration initiatives in alignment with enterprise standards and reliable modernization practices. Passionate about advancing into large-scale, real-time applications while building deep expertise in AI/ML integration and Big Data.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring, React, Angular, JavaScript, TypeScript, SQL, NoSQL

Cloud & DevOps: AWS, GCP, OpenShift, Docker, Kubernetes, Linux, Terraform, CI/CD - Tekton, GitHub.

Tools & Technologies: Kafka, Rabbit MQ, Redis, Splunk, Dynatrace, Jira, Maven, Gradle, JFrog.

Databases: PostgreSQL, MS SQL Server, Oracle, MySQL, MongoDB.

API & Security: RESTful APIs, SOAP APIs, GraphQL, Apigee, Swagger/OpenAPI, JMeter, 42Crunch, JWT, OAuth 2.0.

AI/ML: Spring AI, RAG, Vector Databases, Gemini, LangChain, Claude, Copilot.

PROFESSIONAL EXPERIENCE

Full Stack Java Engineer - Ford Motor Company (JULY 2023 – Present)

Parts Control Application | *New Application, React, Redux, TypeScript, Spring, GraphQL, IBM DB2, BigQuery, GCP, Entra ID, Tekton (B2B)*

- Developing APIs serving 25+ apps, supporting enterprise reporting infrastructure and audit requirements at sub-100ms latency.
- Migrated 10 REST endpoints to GraphQL over BigQuery, reducing payload size for 15 downstream apps by eliminating over-fetching.
- Maintaining batch data jobs processing millions of records daily, transforming and transferring data via SFTP to 25+ downstream apps.
- Delivered 20+ features in Agile sprints, reducing time-to-release by partnering directly with product owners on requirement scoping.

Global Brand Protection System | *Rewrite Project, React, TypeScript, Tailwind, Spring, MongoDB Atlas, GCP, ADFS, Redis, Tekton (B2C)*

- Rewrote legacy UI and built reusable react comps with custom hooks, wrapper classes and context API, aligned with enterprise standards.
- Implemented DB-driven dropdowns and virtualized data tables, achieving sub-150 ms render time for minimum 10k+ rows.
- Enforced AES-GCM for PII/SPII data, remediated 60+ OWASP issues, achieving full compliance with 42Crunch and GCP Cloud Armor WAF.
- Implemented SDD and resolved 42Crunch defects to maintain secure API design standards via code reviews and security validation.
- Built APIs by applying SOLID principles and Domain Driven Design, with Redis caching, pagination, rate limiting, and query optimization.
- In UAT testing, leveraged GitHub Copilot with JUnit & Mockito to build test suites validating complex business logic and edge cases.

Global Catalogue Application | *Enhancement Project, Angular, PrimeNG, SCSS, Spring, PostgreSQL, GCP, Entra ID, Pub/Sub, Redis, GitHub Actions (B2B)*

- Developed responsive web pages incorporating features such as lazy loading, breadcrumb navigation, and authorization strategies.
- Implemented ACID compliant CRUD services and concurrent batch jobs using Spring Data – JPA & Hibernate, Batch, MVC, and Security.
- Built Pub/Sub APIs with WebFlux and Virtual Threads for non-blocking, high-throughput event processing via Java concurrency.
- Implemented Redis-backed JWT caching for Entra ID OIDC, cutting auth latency 50% with token expiry and revocation enforcement.
- Enabled pre-authorized service-to-service communication using Spring Cloud & RestTemplate across 10 distributed microservices.
- Resolved an Apigee API Gateway file transfer limitation by architecting a GCS bucket solution with signed URLs for secure access.
- Led CI/CD migration from Tekton to GitHub Actions, improving deployment reliability and reducing deployment time by 60%.

GSPPS - Logistics Application | *Legacy App, Java, Struts, WAS Liberty, Spring, IBM DB2, MS SQL Server, Red Hat OpenShift, ADFS, Jenkins (B2C)*

- Migrated the Legacy Monolithic WAS Liberty app from AWS (ECR, EKS, S3) to RedHat Quay & OpenShift, reducing infra cost by 50%.
- Developed and deployed CRUD APIs on OpenShift, utilizing resources like Deployments, Services, Ingress, Egress, Routes, and Secrets.
- Integrated Splunk & Dynatrace via sidecar containers for LnP Testing and enabling proactive incident response and reduced MTTR.
- Strengthened release governance and security via CI/CD, DevSecOps, auth controls, and Apigee for APIs consumed by 5+ internal apps.
- Led reverse KT sessions, mentoring team members on CronJob scheduling, SSL/DNS mapping, and alerts and rules for batch APIs.
- Managed OpenShift CronJob deployments for batch jobs, optimizing cost and performance while ensuring Kyverno policy compliance.

PERSONAL PROJECTS

🔗 **Sentiment Ledger** | *Spring Boot, Spring AI, Google Gemini, Kafka, Redis, Mongo DB Atlas, Razorpay, Docker*

- AI-powered invoice or subscription approval system that automates approve/reject/manual-review decisions using RAG-grounded LLM reasoning over financial policies, with full audit trail and idempotent payment execution using Razorpay.
- Implemented Kafka to decouple API latency from AI processing, used Redis for distributed locking MongoDB Atlas vector search for RAG so the AI grounds decisions in real policies, Resilience4j circuit breaker to stop hammering a failing payment service, and Prometheus for confidence-scored metrics to support compliance audits.

🔗 **Event Announcement System** | *Python, HTML, CSS, JavaScript, Terraform, AWS – Lambda, SNS, S3, & CloudFront*

- Serverless event notification platform where users subscribe by email and admins publish events that automatically alert all subscribers, removing manual mailing list upkeep.
- Used Lambda to avoid idle server costs, SNS for native email fan-out instead of a custom notifier, S3 for cheap static hosting, CloudFront for fast HTTPS delivery, and terraform to make infra reproducible in one command.

EDUCATION

Bachelor of Engineering – Information Science and Engineering

Kumaraguru College of Technology, Coimbatore, Tamil Nadu, 2019 – 2023
